---

Systems engineer with more than 3 years of experience in the development and leadership of full stack web solutions, including business applications, web platforms, self-management systems, client portal, projects based on WordPress among others. Solid knowledge in backend and frontend, integration with APIs, relational databases and support systems such as tawk.to with ticket management, focused on process improvement, scalability, and user experience.

PROFESSIONAL EXPERIENCE

IM ingenieria   **Cali, Colombia**
Full Stack Developer   *2024 – Present*

- Joined as Technology Assistant, providing N1/N2 technical support to the legacy system IMEC+, ensuring operational continuity and resolution of critical incidents.
- Evolved to Analyst and Senior Full Stack Developer, leading the design, development, and evolution of three strategic platforms: IMEC++, Self-Management Portal, and Client Portal.
- Architecture and technological migration of IMEC++, from PHP 7.2 to PHP 8.2, with modern frontend in Nuxt 3 / Nuxt 4, TypeScript, and TailwindCSS, implementing clear separation of frontend and backend and good scalability practices.
- Development of RESTful APIs and backend services, integration of modules, and communication between internal and external systems.
- Implementation of the Self-Management Portal, allowing visualization and download of payment slips, salaries, and associated concepts, updating personal information, and managing disabilities.
- Integration and transition of the accounting ERP Siesa 85 CGUNO to SIIGO, ensuring correct synchronization of payroll and data exposure for the Self-Management Portal.
- Development of the Client Portal, managing surveys, billing, approval of unproductivities and remissions, with state control, validations, and dynamic reporting.
- Digitalization and modeling of business indicators, preparing datasets for advanced analytics and data-driven decision making.
- Implementation of corporate chat with Tawk.to, integrated into creation, classification, and resolution of ticket flows, optimizing internal and external communication.
- Migration of business software repositories to GitHub, from an insecure internal server, ensuring security, version control, and risk mitigation of information loss.
- Management of deployments and servers with Azure and Nginx, ensuring availability, performance, and scalability of systems.
- Development with PHP, Laravel, JavaScript, Nuxt, TypeScript, TailwindCSS, PostgreSQL, applying good software engineering practices, Git/GitHub, automated testing, and focus on security, performance, and maintainability.

Siesa   **Cali, Colombia**
Developer Backend   *2022*

- Development and maintenance of custom plugins in WordPress, extending core functionalities and adapting platforms to specific business requirements.
- Implementation of backend logic in PHP, integrating services and custom modules, ensuring performance, security, and scalability.
- Consumption and exposure of REST APIs, facilitating integration with internal systems and third-party platforms.

- Management and optimization of relational databases, ensuring integrity, availability, and performance of information.
- Collaboration with multidisciplinary teams for requirements analysis, technical design, and deployment of solutions.
- Application of best development practices, version control with Git, and technical documentation of implemented solutions.

Freelance   **Santiago, Chile**
Full Stack Developer   *2022 - 2024*

- Design and development of custom web solutions for business clients.
- Development of custom plugins in WordPress, including advanced search systems, dynamic filters, and query optimization.
- Construction of billing and portfolio management systems, with automatic alerts, user control, roles, and permissions.
- Frontend development with HTML, CSS, JavaScript, jQuery, React, and TypeScript, prioritizing user experience and performance.
- Backend development with PHP and Node.js, integrating MySQL and PostgreSQL.
- Participation in requirements gathering, technical design, deployment, and post-production support.
- Use of Git/GitHub for version control and continuous delivery.
